The TSL Safe Cleaning Solution is the safest, cleanest, and most efficient way to clean kitchen extraction systems

SAFE

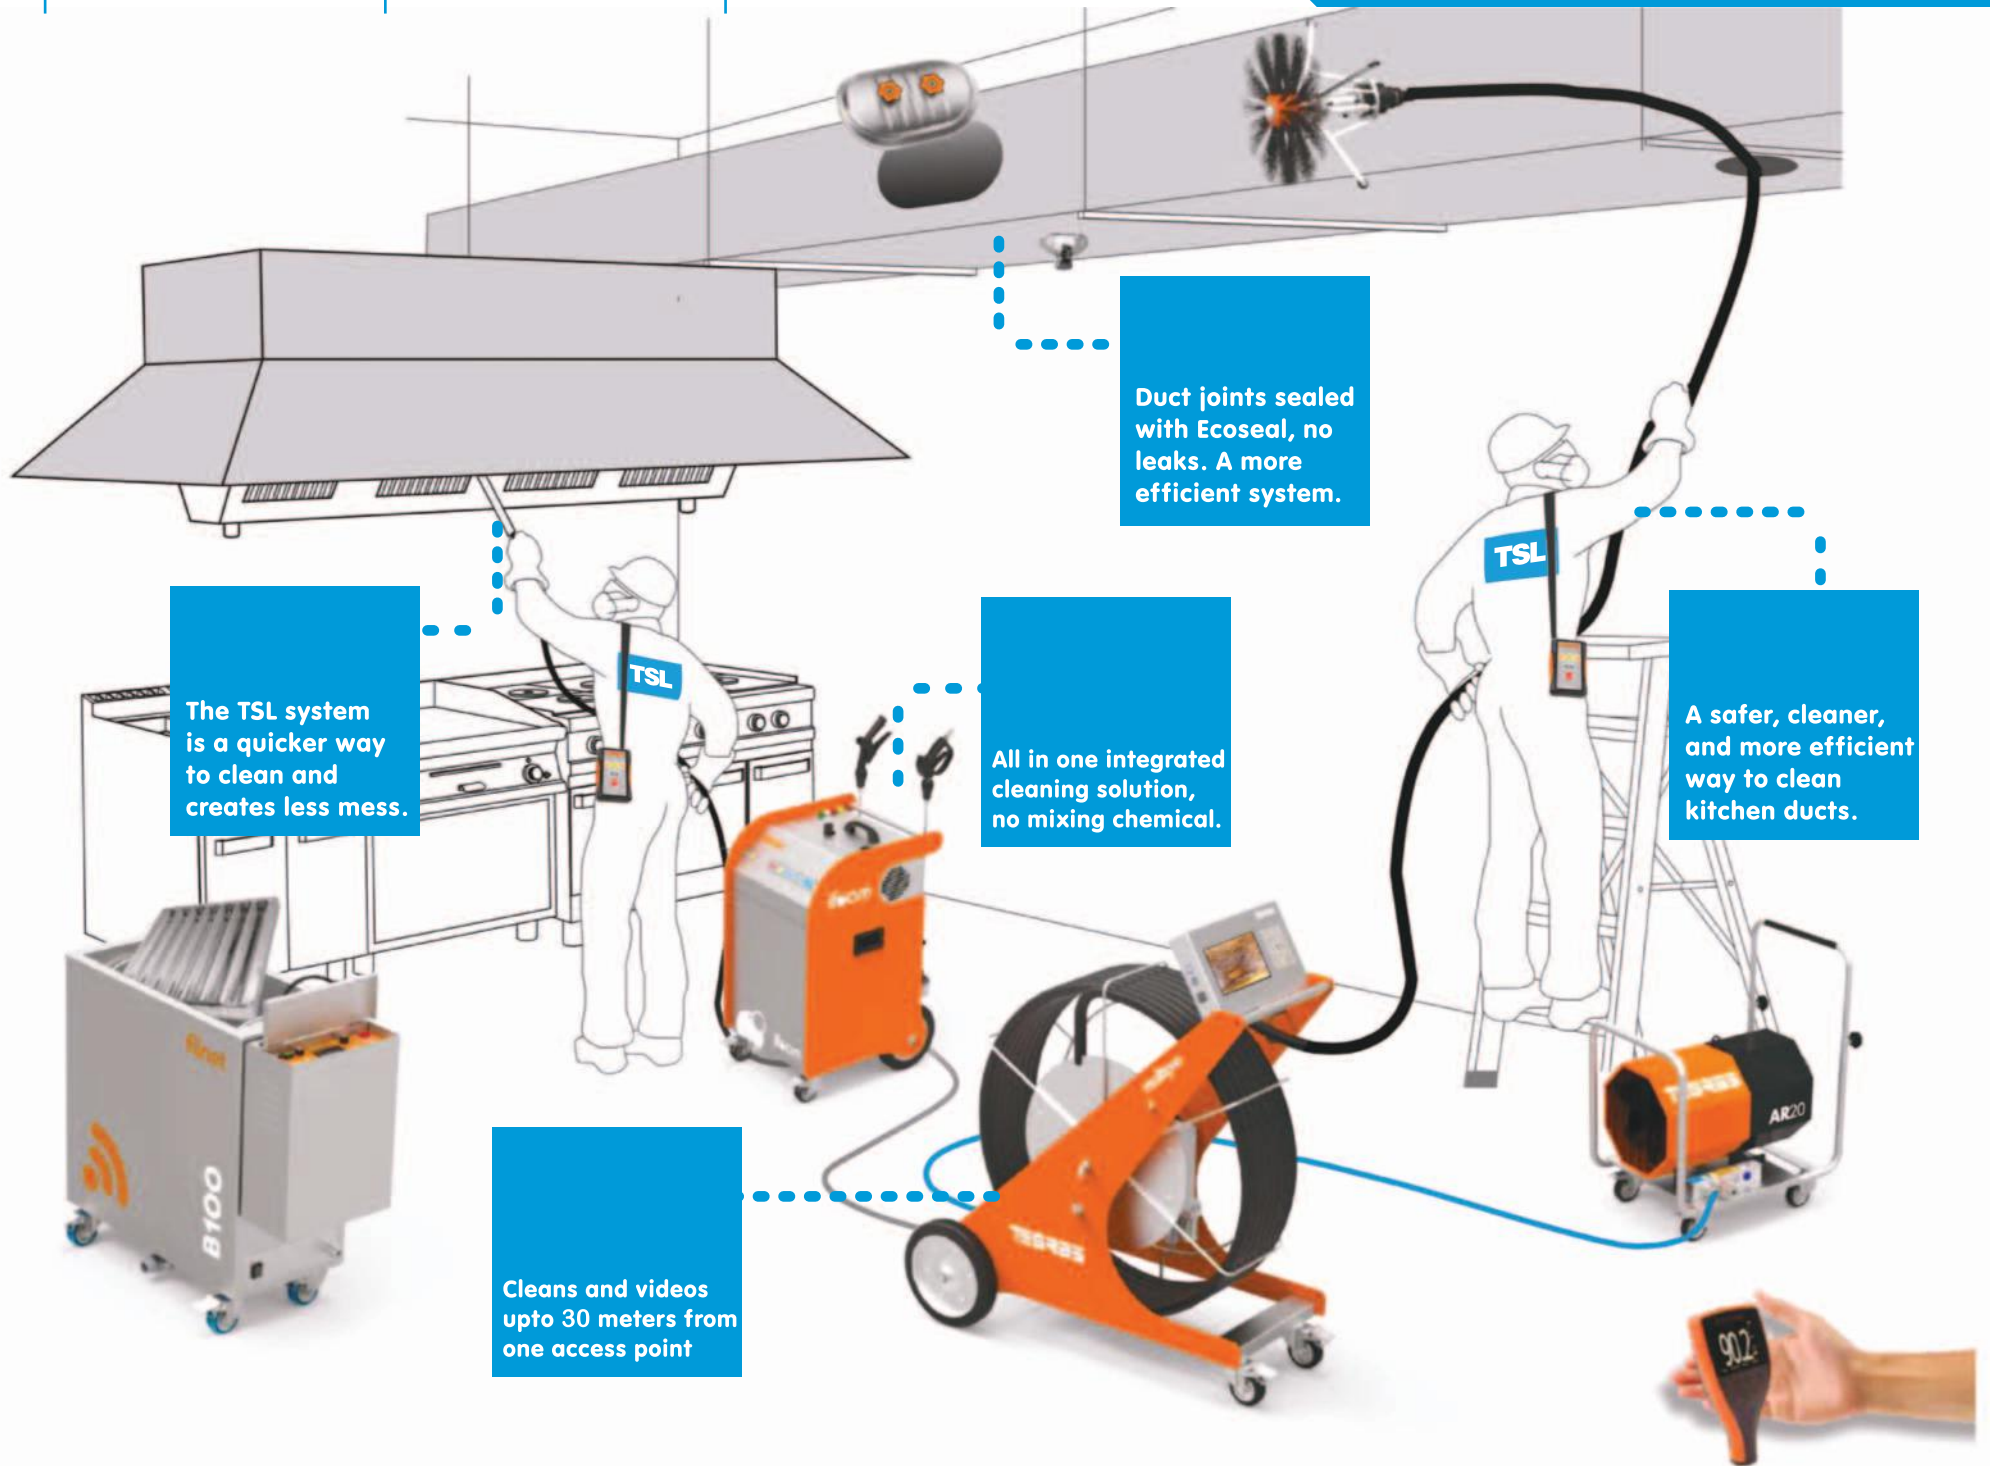

The TSL Safe Cleaning System ensures that kitchen duct work does not leak hot grease. It is a safe working practice utilising safe cleaning chemicals.

CLEAN

The TSL solution is a much cleaner way to clean kitchen ductwork and cleans a much larger percentage of the kitchen extraction system.

EFFICIENT

The system makes it much quicker to clean kitchen extraction systems, meaning you experience less downtime and no additional time issues caused by leaking kitchen ductwork.

The TSL system is a quicker way to clean and creates less mess.

Duct joints sealed with Ecosseal, no leaks. A more efficient system.

All in one integrated cleaning solution, no mixing chemical.

A safer, cleaner, and more efficient way to clean kitchen ducts.

Cleans and videos upto 30 meters from one access point

Innovative Cleaning Machines |

Central to the TSL Safe Cleaning Solution is the innovative Tegras cleaning machine technology.

THE MULTI PRO

“The only effective solution for cleaning grease in duct work” The injection system of the Multi Pro projects a dense foam that sticks to the inside walls of the duct, literally melting the grease off.

The innovative brush system can clean much more of any kitchen duct, whether that be square or round, and reach places that are typically inaccessible.

The Multi Pro can include a video inspection system which enables the kitchen duct to be viewed both before and after work.

THE IFOAM PRO

As an integrated system you can forget the compressor, those tricky bottles of chemicals, and everything else that used to be needed to clean a kitchen extraction system.

The iFoam Pro offers you everything you need to clean hoods, plenums and the motors of extractor systems. It combines the action of water, heat, chemicals and the air, to help you tackle the most difficult cleaning jobs in kitchen extractors.

THE IFOAM MINI

When you need a generator of active foam to clean kitchen extraction systems in the most inaccessible places, like terraces, roofs, elevated areas with difficult access the iFoam Mini is the ideal versatile solution.

Small and versatile it enables the benefits of the system to be enjoyed in even the most hard to reach of places.

ECOSEAL

Making your kitchen Extraction System waterproof and non flammable. The traditional way of cleaning kitchen extraction systems with aggressive cleaning chemicals and cleaning by hand using scrapers or wire brushes is extremely labour intensive and not without danger to the person cleaning and can cause damage to the ducting.

Since the areas to be cleaned are often difficult to reach, the result is only partially acceptable and by cleaning this way you have a considerable risk of damaging the surrounding area.

The TSL Safe Cleaning Solution is different. Once the Kitchen Extraction System has been correctly cleaned using the TSL system, we then seal the kitchen extract system to make it waterproof and non flammable with Ecoséal.

Ecoséal is a specifically developed waterproof sealant that is also nonflammable. It is a water based opaque and halogen-free sealant that is also non-hygroscopic.

Sealing a cleaned Kitchen Extract System with Ecoséal protects the surrounding area from the dangers of leaking grease from the kitchen ductwork joints. Ecoséal is also a non flammable so the kitchen extraction system is fully protected and maintained to the required high standard as part of a cleaning program.

When dry Ecoséal is elastic, waterproof, UV and oil resistant and can therefore be used in locations with a high relative humidity and locations which are affected by weather conditions.

SAFE GREASE DUCT CLEANER

The final element of the TSL Safe Cleaning Solution, an advanced non corrosive grease cleaner specifically developed for cleaning kitchen extraction systems.

1. Bag in box Technology
2. No drips or spills of neat chemical
3. Same dilution every time
4. Non corrosive
5. Environmentally friendly
6. Safer for user, restaurant customers and staff

TSL SAFE CLEANING DUCT CLEANER is a non corrosive, safe to use chemical, specially designed with safety in mind.

Most cleaning companies will use a highly corrosive cleaning chemical which will damage the ductwork and the seals which make it airtight. Using these chemicals can cause leaking after as little as just one clean, endangering everyone on site.

SAFE GREASE DUCT CLEANER has a corrosion inhibitor in it which means it will not damage soft metal, aluminium or the seals and joints in the system. Made to work and clean effectively on metal surfaces and Ecosal.

Using this chemical on your ductwork will help your system run more efficient, reduce the chance of any damage being caused, giving you a safer and more effective result.
